

# HyProCoat™ 855

VERSATILE ORGANO-MINERAL TOPCOAT WITH  
LOW CoF FOR Zn & ZnNi

EXCELLENT FOR LOW  
COEFFICIENT OF FRICTION  
APPLICATIONS

HyProCoat 855 is a versatile organo-mineral topcoat for use over passivated zinc and zinc-nickel coatings. It was designed to enhance color, add gloss, minimize drip marks, and achieve low COF values. The nano-size polymer particles penetrate surface cavities of the passivation layer for improved adhesion and produce high clarity and passivate color retention. The resin that comprises this topcoat imparts lubricity to the coating, making this ideal for fastener applications.

## FEATURES:

- Suitable for clear, blue, yellow, and black passivates
- Excellent corrosion protection
- Easily removed by alkaline solutions
- Immersion and spray applications
- Coefficient of friction over Zn ~ 0.11
