

NICKEL PLATING

BRIGHT AND SEMI BRIGHT SYSTEMS

Over the last decade, PAVCO® has invested significant research into nickel technologies that offer advantageous alternatives for today's finisher. For more information on our full line of nickel technologies, please contact a PAVCO® Technical Service Representative or browse below to learn more about our products.

SPECIFICATIONS

SEMI BRIGHT NICKEL

New Era SB-1LP	An exceptional semi-bright nickel system, offering advanced leveling capabilities over the New Era SB system.
----------------	---

BRIGHT NICKEL

Constellation	Extremely versatile, high leveling & high performance bright nickel process suitable for all substrates and use in multi-layer automotive nickel systems.
Merit MB-3XL	A superior, fast leveling, non-index, ultimately brilliant nickel system designed for low thickness deposits and is unparalleled for high spec nickel plating.
Merit M-3XL-SOT1	The ultimate fast leveling system, specially designed for low thickness deposits, and is unparalleled for high spec nickel plating.

HIGH SULFUR NICKEL

SNi	Single additive nickel system that promotes Sulfur co-deposition, resulting in a sacrificial nickel layer between the semi-bright and bright nickel layers, for increased corrosion protection.
-----	---

MICROPOROUS NICKEL

IMP-Ni	Contains finely divided and well dispersed particles that provide microporosity in the subsequent chrome layer, increasing corrosion protection.
